

400MHz, Fast Settling Operational Amplifier

The Intersil HA-2540 is a wideband, very high slew rate, monolithic operational amplifier featuring superior speed and bandwidth characteristics. Bipolar construction coupled with dielectric isolation allows this truly differential device to deliver outstanding performance in circuits where closed loop gain is 10 or greater. Additionally, the HA-2540 has a drive capability of $\pm 10V$ into a $1k\Omega$ load. Other desirable characteristics include low input voltage noise, low offset voltage, and fast settling time.

A $400V/\mu s$ slew rate ensures high performance in video and pulse amplification circuits, while the 400MHz gain-bandwidth product is ideally suited for wideband signal amplification. A settling time of 140ns also makes the HA-2540 an excellent selection for high speed Data Acquisition Systems.

Refer to Application Note AN541 and Application Note AN556 for more information on High Speed Op Amp applications.

For a lower power version of this product, please see the HA-2850 datasheet.

CAUTION: Stresses above those listed in "Absolute Maximum Ratings" may cause permanent damage to the device. This is a stress only rating and operation of the device at these or any other conditions above those indicated in the operational sections of this specification is not implied.

NOTES:

1. Maximum power dissipation with load conditions must be designed to maintain the maximum junction temperature below 175°C for the ceramic package, and below 150°C for the plastic package. By using Application Note AN556 on Safe Operating Area Equations, along with the thermal resistances, proper load conditions can be determined. Heat sinking is recommended above 75°C.
2. θ_{JA} is measured with the component mounted on an evaluation PC board in free air.
